Week -2

Ili.Harshika (2520030607)

Question :

The Librarian's Dashboard Scenario The library is now digital! The head librarianneeds a report to see which members are active and which books are in the collection. You also need to handle a "Book Donation" process where a new bookis added and assigned to a category at the exact same time—if one part fails, thewhole process must stop to keep the catalog accurate.

Task to be Done

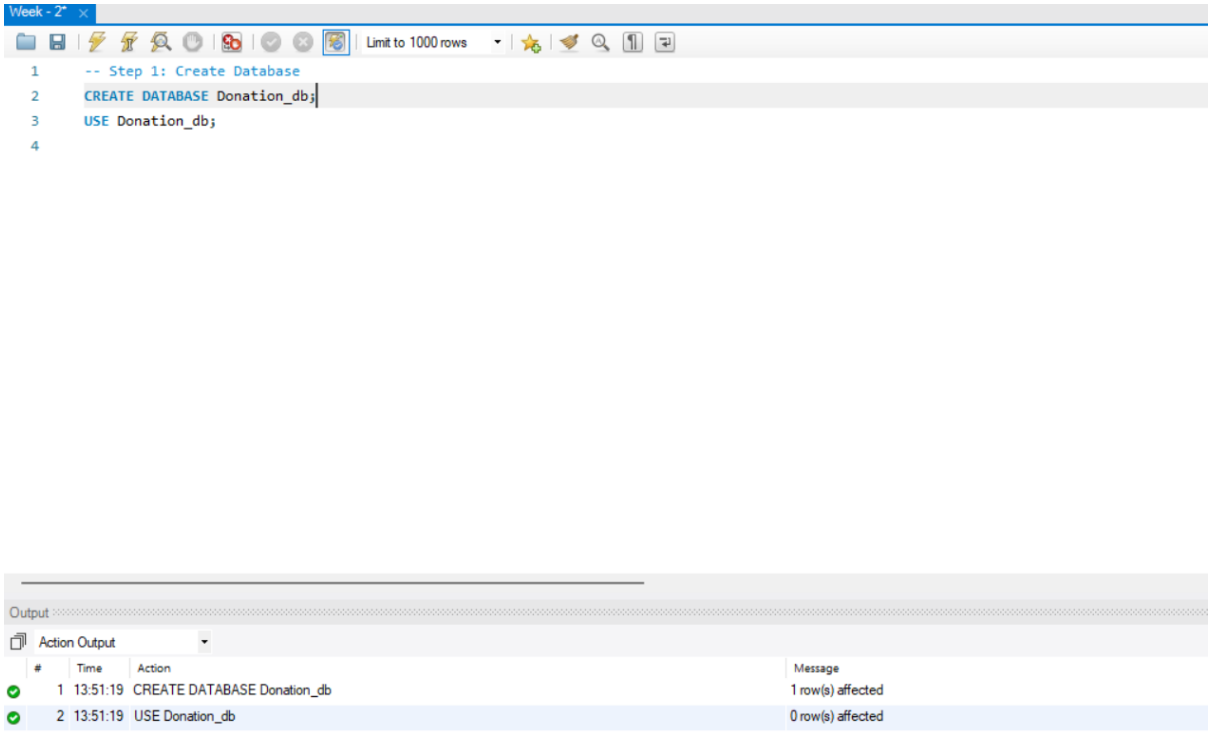

1. TheCatalog Search (JOINs): Create a third table called Loans that connects member_idto book_id. Write a query to show the Member Name and the Book Title they havecurrently borrowed.

2. Collection Stats (Aggregations): Write a query to find thetotal number of books published in each year. o Hint: Use COUNT(book_id) andGROUP BY published_year.

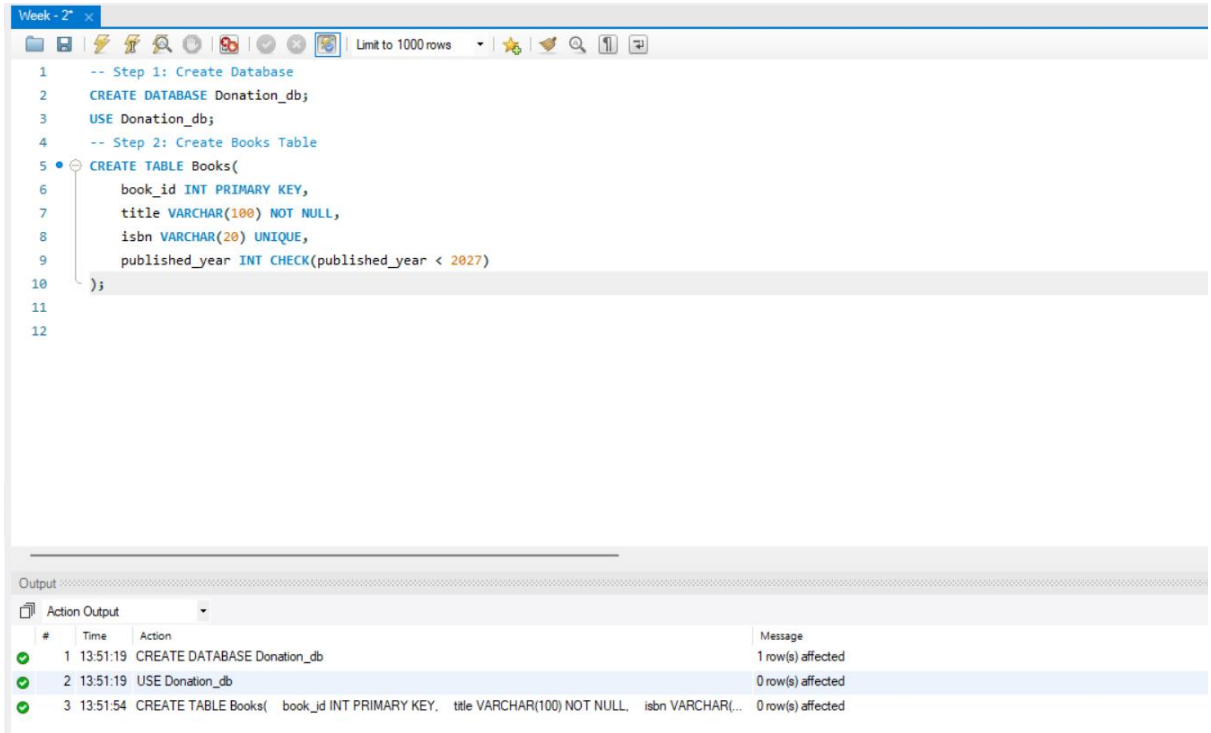

3. The Donation Transaction (ACID): Use aTransaction (BEGIN...COMMIT) to add a new book to the Books table andsimultaneously log the entry in a Donation_History table.

4. Search Speed(Indexing): Create an Index on the isbn column. Explain why searching by ISBN isnow faster for the librarian than searching by Title. Skill Set Gained • RelationalLogic: Connecting independent tables (Books + Members) through a Junction table(Loans). • Analytical SQL: Using GROUP BY to generate business insights. •Atomic Operations: Using Transactions to ensure multiple database changessucceed or fail as a single unit.

Step 1 — Create Database

Step 2 — Create Books Table (DDL + Constraints)

Week - 2*

Limit to 1000 rows

```sql
-- Step 1: Create Database
CREATE DATABASE Donation_db;
USE Donation_db;
-- Step 2: Create Books Table
CREATE TABLE Books(
    book_id INT PRIMARY KEY,
    title VARCHAR(100) NOT NULL,
    isbn VARCHAR(20) UNIQUE,
    published_year INT CHECK(published_year < 2027)
);
-- Step 3: Insert Records into Books Table
INSERT INTO Books VALUES
(1,'The Great Gatsby','9780743273565',1925),
(2,'To Kill a Mockingbird','9780061120084',1960),
(3,'1984','9780451524935',1949);
```

Output
